# Main Innosoft Projects

The logo for YORSO features a stylized 'Y' in orange and blue, followed by the word 'ORSO' in a dark blue, sans-serif font. The entire logo is centered within a white circle that has a red border.

**YORSO**

The logo for ITS consists of a purple location pin icon with a white stylized 'Y' inside a circle, followed by the letters 'ITS' in a large, bold, black, sans-serif font. The entire logo is centered within a white circle that has a red border.

**ITS**

# YORSO is an Alibaba for fish and seafood

Our web-service automates sales, purchases and logistics of the products on the b2b fish and seafood wholesales market.

## Our distinctive features:

- Legally valid electronic document management
- Shipping company participation in transportation tenders
- Worldwide product distribution and search
- Only targeted offers to customers according to their profile
- Dutch auction system support
- Full logistics and customs support
- Actual transactions on the international market: Russia, China, Thailand, Morocco, Mauritania, Baltic and Latin American countries

# Target audience

## Categories:

- Fish and seafood producers / fisheries
- HoReCa и Retail buyers
- Large distributors

## Volumes

- From 28 tons to 1000 tons of products per month

## Geography:

- Western Europe
- Russia and CIS
- Asian Pacific Region
- African seaboard countries
- North and Latin American countries

# Problems Yorso solves

## High distribution costs

Fish and seafood suppliers have to blur their focus from primary business and build the sales and procurement departments

## Expenditure for intermediaries

Intermediaries (traders) in the supply chain solve the organizational issues but their service leads to additional price grow. Traders «force» the purchases price unprofitable for suppliers and create additional expenses for the end buyers

# How it works

Supplier

## Provides:

- Product price and description
- Product photos and videos
- Possible product delivery ways
- Updating volumes, prices, descriptions, photos, videos in manual or automatic mode

Yorso

## Provides:

- EDM and product promotion
- Counterparty verification
- Calls and clients search
- Meetings with counterparties
- Logistics

Customer

## Gets:

- 24/7 showcase
- Detailed information
- Product subscription
- New product requests
- Search in 1 click
- Advanced search
- Quick response
- Store delivery

# Our advantages

## **Focus on fish and seafood market**

We speak our customers language having 12 years of experience on fish and seafood wholesales market. Moreover, we have been developing the project for 3.5 years while testing hypotheses and business model on international market: Russia, China, Morocco, Mauritania, Thailand, Ecuador, etc.

## **We have the working product**

Multilingual website with products and orders management system, built-in business-specific CRM with Email-marketing, legal EDMS, search system, user requests, communication and notifications system

# Team and resources

**Vyacheslav  
Lukin**

Executive director

**12 years in IT&T** (Megafon, Huawei, NVision)  
**Master's degree** MSIT-SE CMU IU, 2016

**Dmitriy  
Maksimenko**

Sales director

**12 years in b2b wholesales trading**  
(Russian Sea group, Meridian, Rosfood)  
**MBA** Strategic management, 2009

## Team

7 sales representatives in Russia, Morocco, and Mauritania  
2 software engineers with 5+ years of experience

**Data Scientist**

**International lawyer**

**Procurement manager**

## People and processes

Location in Innopolis city allows scaling development department and collaborating with the best world-known universities, professors, Data Science / Machine learning and other laboratories

The education by MSIT SE CMU program gives our employees ability to build processes based on CMMI practices in combination with 6-sigma quality model and Agile-based methodologies for better time-to-market efficiency

# Technologies

## Server part:

- Phalcon framework as a primary server engine for API and micro services
- NodeJS for notifications and asynchronous messaging
- MySQL as a primary database engine
- Redis database for primary caching and queueing
- Memcached for ultrafast caching and storing user sessions
- Sphinx as a search engine
- Ethereum for international EDM

## Integrations:

- Amazon SES for Email marketing and analytics
- Yandex for dynamic automated translation
- Kontur EDMS as a verification center for EDM
- 1C for internal accounting
- Dadata/Google API for company addresses and requisites
- Central Bank of Russia as a bank reference
- Bitrix24 for quick operators work

**Frontend:** React stack

# About YORSO

## CLIENTS DATABASE

**3,5**

years on the  
market

**7**

countries +  
entering the EU

**600+**

registered companies

**29**

active suppliers

## SALES

**13 500**

tons delivered

**5-7%**

average additional profit  
of customers

**140+**

delivered orders

**100%**

customers retention  
rate

# YORSO Geography

Japan

# ITS

## Intelligent Transport Systems

**Big Data and AI**

**Computer Vision**

**Machine Learning**

# ITS — Intelligent Transport Systems

**ATMS**— Automated traffic management system

## Prediction

- weather condition prediction on the road section
- roadbed condition prediction for 4-24 hours
- prediction quality assessment
- dangerous weather condition warning
- Preventive measure recommendations according to the Road Industrial Methodical Document
- instructions to dispatcher
- notification of interested parties

## Video analytics

- autonomous analytics “on the camera”
- statistics collection from the road segment
- ability to receive data in real time
- incidents detection
- does not require broadband Internet connection
- integration with external services to use the system for different business tasks

# Problems ITS solves

## High road maintenance costs

Lack of qualitative road condition prediction does not allow more effective glaze-ice and snow protection on the road. The Road Services “play safe” when ensuring protection.

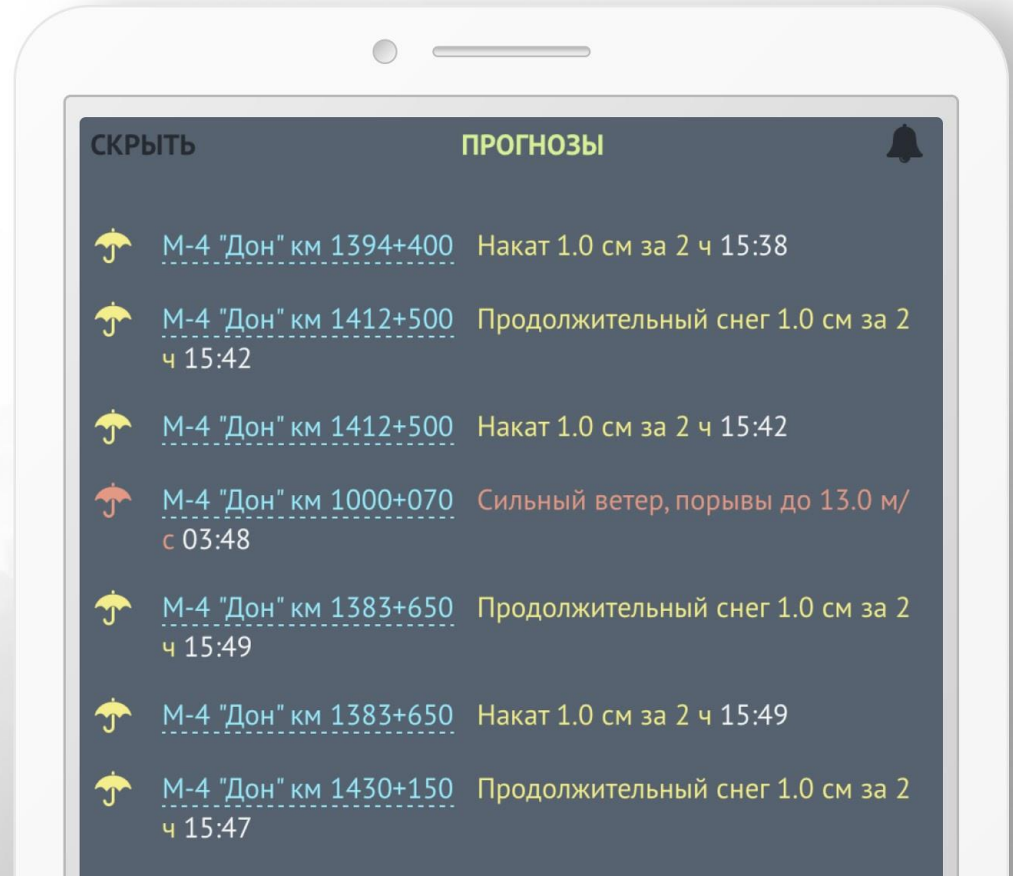

## Cloud video analytics limitations

Current market video analytics solutions require good infrastructure and high-rate channels to stream video to the server, where it is analyzed. Such approach makes some solutions, that are require local video processing, impossible and expensive.

# ITS — weather prediction

- Canadian physical model METRo
- Integration with ATMS
- 1500 road meteorological stations

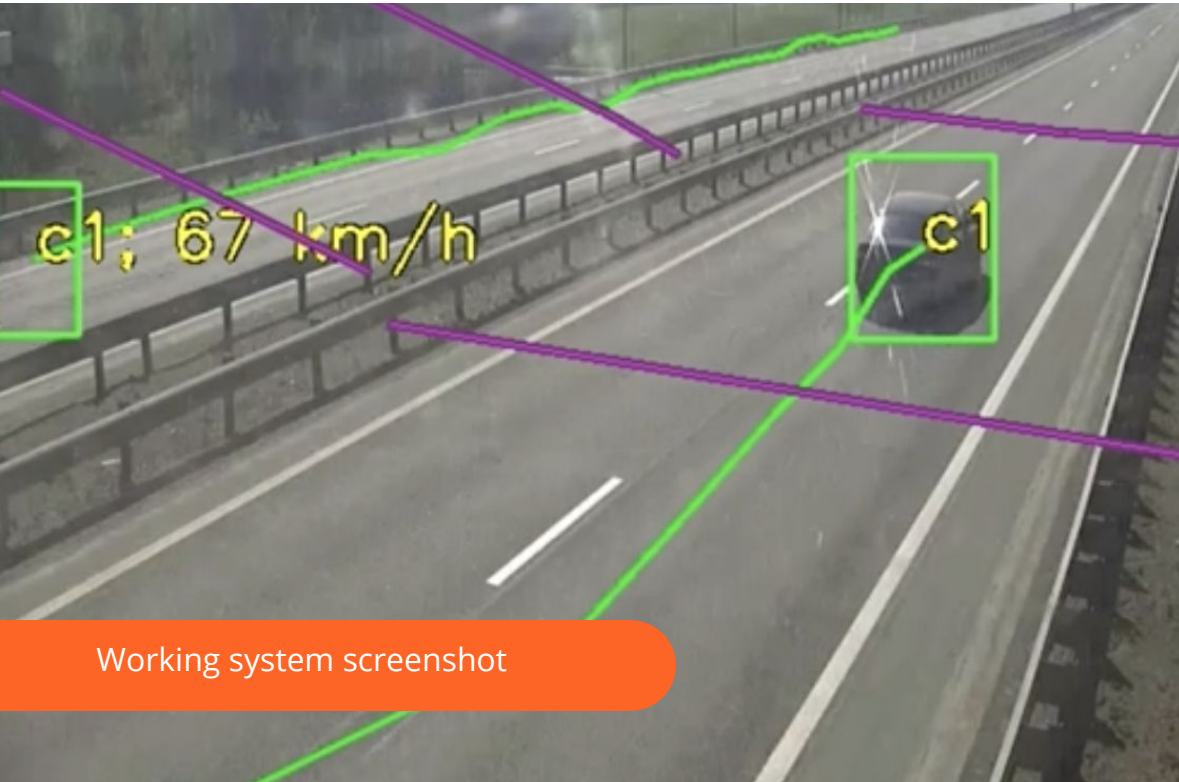

# Video Analytics — **MMCV**

## Minimax Computer Vision

- Vehicles detection
- Classification
- Incidents analysis
- Road Traffic Accidents
- Traffic characteristics
- API for data receiving
- Autonomous operation

# Computer vision system for traffic analytics

Working system screenshot

## Tracked parameters

- Each vehicle speed
- Average traffic speed
- Distance between vehicles
- Traffic density on the road section
- Vehicle class

# ITS geography and sales

**6** video analytics systems are installed in Federal state institution of Road Management “Baikal region”, Irkutsk

**2** video analytics systems were delivered to OOO “IT Smart City”, Moscow;

**1** systems are installed in Federal state institution of Road Management “Yenisei”, Kyzyl, the Republic of Tuva.

## Future shipments:

4 systems in Baikal region;

7 systems in Yenisei;

3 systems in Road Administration “Moscow-Bobruisk”, Kaluga.

# Application variants in Smart City

## Smart lighting

Real-time  
management

## Crossroads monitoring

Road traffic accidents  
recording, load  
planning

## Outdoor advertising

Adaptable in real  
time

## Security

Crowd behavior  
analytics
